SARDAR PATEL UNIVERSITY
Programme: B.B.A. LL.B. (5 Year) Integrated Degree of Bachelor of Business
Administrative & Law
Semester- V
Syllabus with effect from June -2021

Objectives of the course:

To look into the legal regime governing outer space, the moon and other celestial bodies, and its implications on the recent scientific and technological developments. the developments of space law at national level by analyzing the laws passed by some of the space-faring nations. Sky's upper horizons have always fascinated and perturbed humans. The human race, however, did not have the knowledge or resources to reach and control any of these 'realms' during much of its history. For this reason, air and space laws did not form during much of human history. We have entered a new age of air and space exploration as a result of the scientific developments of the last century. Clearly, a conflict over the use of these "Resources" has erupted, requiring new legislative mechanisms and regulations.

The Air and Space Law has developed complementary branches due to this. Thus, these disciplines of International Law are of recent origin. In addition, the course examines the legal frameworks governing various aspects of air and space activities. The dynamic in the nature of the subject has at one level contributed to its continuous evolution, resulting in new developments such as Enactment of International Conventions, Technological Developments in Aviation Industry, Aviation Security and Product Liability, Freedoms of the Air, Open Sky Agreements, Territorial Sovereignty, Jurisdiction, Property Rights, Commercialization and Militarisation of the Outer Space
