

Master of Science – Nano Science & Nano Technology
(M.Sc.) (Nano Science & Nano Technology) Semester –II

| | | | |
|-----------------------------|------------|---------------------|--------------|
| Course Code | PS02CNST52 | Title of the Course | Spectroscopy |
| Total Credits of the Course | 4 | Hours per Week | 4 hrs |

| | |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Course Objectives: | <ol style="list-style-type: none">1. Characterization methods used for different materials by various spectroscopic techniques2. Theoretical aspect and interpretation of spectral data for different spectroscopic technique3. principal of NMR and Mossbauer spectroscopic techniques and molecular structure determination |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Course Content | | |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| Unit | Description | Weightage* (%) |
| 1. | Atomic absorption and flame emission spectroscopy. uv, visible and photoelectron spectroscopy introduction, theoretical consideration, application. | 25% |
| 2. | Introduction of microwave spectroscopy, rigid rotors, microwave spectra of diatomic and linear triatomic molecules, numerical problems. Harmonic and anharmonic oscillation in presence of IR, group frequency concept and its limitation, classical theory of Raman effect, selection rule for IR/Raman active vibrations. | 25% |
| 3. | Principle of NMR spectroscopy, chemical shift, local contribution to chemical shift, neighbour anisotropic contribution to chemical shift, ring current effect, spin-spin splitting and effect of spin-spin splitting on the spectrum. spin decoupling techniques, molecular structure studies by NMR. | 25% |
| 4. | Mossbauer spectroscopy, resonance absorption in solids, the mossbauer effect, experimental set up, factors affecting the MB spectra, applications. Development of masers and lasers, principle of masers action and types of masers, laser-generation of coherent radiation, type of lasers, application of lasers. | 25% |

| | |
|-------------------------------|--------------------------------------|
| Teaching-Learning Methodology | Group discussion/ Panel/Presentation |
|-------------------------------|--------------------------------------|

| Evaluation Pattern | | |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Sr. No. | Details of the Evaluation | Weightage |
| 1. | Internal Written / Practical Examination (As per CBCS R.6.8.3) | 15% |
| 2. | Internal Continuous Assessment in the form of Practical, Viva-voce, Quizzes, Seminars, Assignments, Attendance (As per CBCS R.6.8.3) | 15% |
| 3. | University Examination | 70% |

| Course Outcomes: Having completed this course, the learner will be able to | |
|----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| 1. | Students will learn about various spectroscopic techniques used for the analysis of the materials. |
| 2. | Basic principles of absorption and emissions spectroscopic technique and interpretation of the data from the spectrum |
| 3. | Knowledge will be useful in R & D and industries |
